-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 18 June 2007 and 23 July 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 128, 129 and 148 are rejected under 35 U.S.C. 102(e) as being anticipated by Taylor et al (6,036,641). Taylor shows a device comprising a single, substantially rigid tissue contact member 1 formed as a unitary, continuous loop (see Figure 8) and a connecting member 3 integrally formed with and extending for the tissue contact member and adapted to be hand held or fixed to a relatively immovable object. The contact member comprises a base member having a central opening.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 128-130, 132-134 are rejected under 35 U.S.C. 103(a) as being unpatentable over Borst et al (5,836,311) in view of Wright (RE38814). Borst shows a

device comprising at least one tissue contact member 81 and a connecting member 80 extending for the tissue contact member and adapted to be hand held or fixed to a relatively immovable object. The contact member is shown to be in the form of a partially closed loop in Fig. 13. Wright shows a heart contact member which may be circular, elliptical, oval or U-shaped (column 5, lines 15-18) depending on the surgery to be performed. It would have been obvious to one skilled in the art at the time the invention was made to construct the contact member of Borst in the form of a continuous loop depending on the surgery to be performed, as taught by Wright. The contact member comprises a base member having a central opening (see Figure 13). The base member has a hollow interior and the connecting member fluidly connects with the hollow interior. As to claim 134, note the holes 82 through a bottom surface.

Claim 130 is rejected under 35 U.S.C. 103(a) as being unpatentable over Taylor et al (6,036,641) in view of Wright (RE38814). The tissue contact member of Taylor has a circular shape. Wright shows a heart contact member which may be circular, elliptical, oval or U-shaped (column 5, lines 15-18) depending on the surgery to be performed. It would have been obvious to one skilled in the art at the time the invention was made to construct the contact member of Taylor in the form of a continuous loop depending on the surgery to be performed, as taught by Wright.

***Allowable Subject Matter***

Claims 145-147 and 149 are allowed.

Art Unit: 3732

Claims 131, 135-137 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

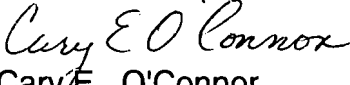

Applicant's arguments with respect to claim 128 have been considered but are moot in view of the new ground(s) of rejection.
